Description

You are trying to create an item with a field that requires a unique value (for example: "Id"). The error shows that

The name of the user account you are creating or updating already exists.

You are trying to register a user without specifying a password.

You are trying to register a user without specifying a username.

The specified password is not in the correct format. The password must be a non-empty string.

A user with the specified username and password combination does not exist in the system.

The specified user was not found.

Some of the data you specified when creating or updating a user is invalid. The error message will contain specific information.

The reset code that you passed is incorrect or has expired.

The verification code that you passed is incorrect or has expired.

You are attempting to verify a user account that has already been verified.

You are attempting to use an email address that already exist in the system.

The requested operation requires an email address to be set for the user.

You have specified an identity provider value that is not recognized by the system

The provider-generated user access token is not present in the request.

You have not specified an identity provider.

The system is unable to match the token you specified with a valid user for the identity provider you are using.

The user has already been linked to the specified authentication provider.

Reset password and resend verification email are not available for users coming from external identity providers.

Your subscription plan does not allow you to run the operation. The message will vary based on the operation you are attempting.

The account that hosts the application has been disabled.

The experimental feature you are trying to use is not enabled for your account.

The provided access token is not valid.

The validity of the provided access token has expired.

The requested resource was not found.

The request is invalid. Consult the accompanying error message to find out what went wrong.

You cannot use this HTTP method with this resource.

You are not allowed to perform the operation.

You did not provide authorization which is required for this operation.

The API version is missing from the request URL.

The filter expression you specified is invalid. Make sure the filter expression is a valid JSON object and it is in the request body.

The Content-Type header is required for this operation, but is either missing or invalid.

You specified an unexisting content type.

The specified content type is not supported by this request.

The body of the HTTP request is invalid. Make sure its format is consistent with the Content-Type header you specified.

The fields expression you specified is invalid. Make sure the fields expression is a valid JSON and it is in the request body.

The request timed out. A request times out if it does not complete within 60 seconds.

The application is down for maintenance. You are advised to stop all requests to it and resume them at a later time.

The required ContentType parameter is not specified.

You have not specified file content or the specified file content is invalid.

The specified item was not found.

There was an error while executing your cloud code. Review your cloud code logic.

The execution of your custom code took too long. Make sure you properly call the "done" callback in all cases.

Your custom cloud code canceled the operation.

If you don't include your own error code when you are setting an error in your cloud code, then this default code is returned.

There was an error processing the email template. The message may contain more information about the error.
